

GitHub push problem solving steps: (specially you accidently pushed the secret key and it is remained in commits)

If you can't push any way you tried , follow the steps bellow:

1: In cmd: run this: robocopy "D:\DAE" "D:\DAE_backup" /MIR

2: In git bash run this to remove the .git file from master folder:
cd to your master folder then run: `rm -rf .git`

3: `git init`

4: `git branch -m master`

5: `git add .`

6: `git commit -m "Clean re-import after corruption fix"`
