

## Success Plan (2-Month Timeline)

Prepared by: Zahra Shefa

Over the past months at DAE, I have followed an intensive and structured daily program. To achieve my career goals in software engineering, I will continue this disciplined approach with clearly defined, time-bound objectives to secure a job within the next **two months**.

### Daily and Weekly Plan

#### 1. Job Applications

- Apply to at least **15 relevant roles per day** (Monday–Friday).
- Track all applications in a spreadsheet with follow-up dates and responses.

#### 2. Coding Practice

- Dedicate **1 hour daily** to problem-solving without using AI assistance.
- Focus on **data structures, algorithms, and system design** questions.

#### 3. Project Development

- **Week 1–4:** Develop and deploy a major API using **Python and Django** (or build a Java + PostgreSQL project).
- **Week 5–8:** Refine, test, document, and publish the project on GitHub.

#### 4. English Communication

- Spend **30 minutes daily** on English writing and speaking improvement (through online discussions, writing short summaries, or mock interviews).

#### 5. Documentation and Presentation

- Apply all key documentation to ongoing and new projects, including:
  - Project Plan
  - Algorithms
  - Flowcharts
  - Status Updates
  - Final Presentation Slides

#### 6. Professional Branding

- Maintain an updated **GitHub** with version control.
- Update **LinkedIn** weekly with new achievements and project posts.

#### 7. Individual Development Plan (IDP)

- Review IDP every **two weeks** to measure skill growth and progress.

#### 8. Interview and Assessment Preparation

- Schedule **two mock interviews per week**.
- Practice technical and behavioral questions regularly.

---

### Outcome Goal:

By maintaining this structured, time-bound plan, I am confident I will secure a professional software engineering position within **two months**.
