I enjoy collaborating with a cross-functional team where individuals take responsibility for discussing topics, coming together, and finding solutions. I tend to focus deeply when I'm working, so I prefer remote work—but that doesn't mean I don't value others' suggestions and help. I also actively enjoy giving advice and offering support.

It's clear that everyone has a unique intelligence when tackling tasks. I'm someone who doesn't settle for easy answers; I always dig deeply into a question or problem before beginning to find a solution. I'm the kind of person who enjoys solving logical and well-defined problems.

I believe that companies aiming to be creative and innovative need employees who love to create and innovate—just like me. I enjoy coding and solving problems, and I take great satisfaction in bringing my ideas to life through code.

The world—and humanity as a whole—needs new technologies to help all sectors of society thrive. Software engineers play a vital role in creating these innovations, designing solutions that enhance comfort, convenience, and overall well-being.

when passionate and talented individuals like you are supported in showcasing their abilities, society benefits tremendously from groundbreaking innovations and greater collective advancement. As Max Roser puts it, "creative and talented people are everywhere, but the opportunity to develop is limited"

I would like to work in an environment that balances work and life, where respect and politeness are highly valued.

The hunger to create new things and make them useful drives me to explore constantly and bring my ideas to life through projects. Whether by earning a master's degree in software engineering, securing a job in the field, or pursuing self-study, I am committed to enhancing my knowledge and skills.
